

Announcing a Forestry specific Wi-Fi connection for when one is on campus (off campus, use the VPN).

Summary: On May 2nd, Forestry users should start using **UBCprivate** wi-fi where your CWL username must be formatted as ***jdoe.frsc***. **UBCprivate** is for laptops, not smartphones, iPads nor other similar devices, these devices should continue to use **UBCsecure**.

What?

Starting May 2nd, Forestry's printers and many of the Forestry license managers will be restricted to **UBCprivate**. **UBCsecure** will no longer be able to access these Forestry resources. Note that access to the Faculty shared drive and UBC's resources (OneDrive/Teams/Canvas/email) are not impacted.

What do I need to do?

Faculty/staff = most, if not all, fac/staff have been bulk loaded in to UBCprivate space. ***Just tag ".frsc" to the end of your CWL username, e.g., jdoe.frsc.***

Grads = grads can register for access by emailing forestry.ithelp@ubc.ca, cc'ing their supervisor and including their CWL username.

Forestry visitors = visitors can register for access by emailing forestry.ithelp@ubc.ca, cc'ing their faculty sponsor, with the following information: CWL username and expected end date. Both pieces of information are required or no access will be provided.

What can I add to UBCprivate?

Just laptops, **do not add smartphones or iPads**. We can see this and will remove your access without notice. Smartphones and iPads should just use **UBCsecure**. Personal laptops should have UBC AMP anti-virus installed (available here: <https://it.ubc.ca/services/desktop-print-services/software-licensing/software-downloads>) before using **UBCprivate**. This is a requirement for any device accessing UBC resources and data.

That is all,
Carl
